

Historical Validation Geometry: Current Corridor Limitation

Observation key
small grey: R15 register target
orange: PROXY observation
teal: priority out-of-corridor target
blue outline: current corridor

R15 register: 29 observations, 0 DIRECT, 1
PROXY, 28 TARGET_ONLY.

NOWPHAS 802G is about 12.3 km outside the
corridor; DART 21418 is about 545 km outside.

This geometry explains why the current R10 h400 result is not historically validated and why the corridor was not altered in R16B.
